

ASSISGNMENT 2

Build a python code , Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Program:

```
import random

while(temperature and humidity):
    temperature=random.randint(15,90)
    humidity=random.randint(15,90)

    if (temperature>35 and humidity>55 ):
        print("High temperature and humidity of:",temperature,humidity,"Alarm is on")
    elif (temperature>35 and humidity<55):
        print("High temperature and Normal humidity of:",temperature,humidity,"Alarm is on")
    elif (temperature<35 and humidity>55):
        print("Normal temperature and High humidity of:",temperature,humidity,"Alarm is on")
    else:
        print("Normal temprature and humidity of:",temperature,humidity,"Alarm is off")
```
